SKYE Search

SKYE SEARCH

A flexible, customizable, and scalable solution set for Elastic search deployments in cloud, on-premises, or hybrid environments.

SKYE Search allows you to leverage the combined power of Elasticsearch stack software and Intersys' big data expertise to not only access your data but also make sense of it through the latest in search technology.

Designed from the ground up, SKYE Search emulates the latest usability and design standards with integrated user interface and experience components. Built-in security features like targeted and role-based access controls prevent unauthorized users from accessing your critical resources. Additionally, SKYE Search includes a connector set for enterprise content and document management, as well as advanced features like Natural Language Processing (NLP), entity extraction, and sentiment analysis.

SKYE Search Enables You to Achieve Greater:

SPEED

Key deployment accelerators reduce deployment time by up to 50%.

FUNCTIONALITY

Integrated security, UI/UX components, data connectors, and next-gen features enable and complement the best of Elastic stack.

SCALABILITY

Component focused, microservices-based, and cloud friendly – SKYE scales with your environments and needs.

SKYE Search – Core Components

INTEGRATED USER INTERFACE AND EXPERIENCE

Facilitates scalability, speed, and simplicity using cutting-edge big data technologies such as Kafka, Cassandra, and the Elastic ELK stack.

STANDARD SECURITY FEATURES

Targeted and role-based access controls provide the administration of security in small or large organizations with hundreds of users and thousands of permissions.

BUILT-IN CONNECTOR SET

Enterprise content, document management, and extraction & sentiment analysis designed to work seamlessly with SharePoint, Sitecore, WordPress, Drupal and more.

Other Key SKYE Search Features

- **Search Preview** - View predictive and real-time results
- **Content Suggestion** - See results based on user searches and other criteria
- **Faceted Searches** - Filter your search results by specific criteria
- **Analytics Overview** - Get a dashboard view with engine traffic and performance
- **Analytics Insights** - Analyze information to improve search experience
- **Recent Activity** - See the recent activity of users over the system
- **Synonyms** - Group similar terms to be treated as equivalent
- **Ranking Customization** - Set and order the results to your liking for specified queries
- **Weights** - Influence the order of your search results based on adjustments to relevance
- **Engine Content** - Quickly search for indexed documents
- **Live Page Content Comparison** - Compare indexed content with live page content
- **Re-indexing** - Indexed data sources are updated automatically
- **Ongoing Crawls** - See the current processes running and crawling content
- **Scheduled Process** - View the processes scheduled for running and crawling content
- **Whitelist / Blacklist URLs** - Set follow/not follow rules to crawl content
- **Developer Search Friendly** - Gain support for binding the search functionality to a specific language or technology (API support)
- **Top Referring Queries** - See your top search results displayed in ranked order
- **Alert Notifications** - Set up alerts on user and content search activity
- **Keyword Matches** - Promote specific URL's when certain phrases, terms or words are searched
- **Document Preview** - Preview the documents in the search result lists before opening
- **Related Queries** - Suggestions to users for related queries similar to recent searches
- **Domains** - View domains, pages, or start URLs where content is crawled
